

SOLAR-POWERED SUN PROTECTION

Our Solar screens are windproof, surface-mounted screens powered by solar energy. You don't need a power supply and installation requires no drilling, cutting, or demolition.

In addition, you get a seven-year warranty on our solar kit (motor, solar cell, and battery). All in all, the perfect solution for renovation projects. Every screen model is now also available in a solar-powered version.

ZipShade® Go Solar

Our budget-friendly ZipShade Go line is now also available in a Solar version. Its compact head box ensures an optimal view to the outside.

ZipShade® Solar

With our standard ZipShade Solar, you can enjoy a pleasant indoor climate in rooms up to 116.2 ft².

Did you know that ZipShade Solar can now also be ordered with a separate solar cell, including a battery for façade installation? This enables you to install the solar cell in a different place on the façade where it can capture more sunlight.

ZipShade® Minimal Solar

The ZipShade Minimal Solar is designed with style in mind. Its sleek, minimalist design allows for seamless integration into the façade, while offering ultimate comfort and premium quality. Moreover, personalization is key.

ZipShade® Top Solar

Enjoy your porch or home extension to the fullest in any season. Whether you want protection from the sun or a cozy atmosphere, ZipShade Solar is the perfect solution. Thanks to the rotatable solar wing, it can be mounted on either the left or right side. If mounting it directly to the head box isn't ideal, the solar wing can also be installed separately.
