Intuition, Innovation and Originality

These are the characteristics that drive our work and our projects. We want to be a point of reference in the world of aluminum shutters, especially with regards to innovation and originality in order to allow the market to always have cutting-edge products.

Company

We are a company specialized in the design, production and marketing of aluminum shutters, with particular attention to the design and safety of the end user.

Mission

The shapes of our models are born from the history and needs of the Italian territory and differ in technological innovation, robustness, durability and attention to details.

Aluminum

The structure of our shutters is made of extruded aluminum in EN AW6060 alloy according to UNI EN9006/1 produced in partner factories. We chose to use aluminum for its strength, lightness and resistance to corrosion. It requires no maintenance and is highly recyclable.

Colors

Painting takes place with oven-baked polyester powders on the surface of the aluminum according to Qualicoat and Qualideco standards, which are product certification relating to painted aluminum recognized at an international level. More than 2000 RAL colors available in glossy, semi-matt and matt finishes, plus new rough colours. More than 300 finishes can be created in wood effects. The accessories and hardware are mainly made of aluminium.

Caring for the environment

We pay great attention to Ecological Care, because we use sophisticated work centers with low energy consumption, paying close attention to the materials used to process the products and their packaging.

Certifications

Punto Persiane sees an important value in certifications not only for the recognition of the resistance of the products but above all for a total relationship of trust with customers. The materials are subjected to careful production and laboratory controls, the processing and assembly takes place in compliance with the specifications for obtaining the CE mark. The control of the raw materials used, the verification of the various processing and assembly phases, the continuous tests on the products and the laboratory certificates obtained guarantee a reliable, long-lasting and certified product.

The INFINITA collection includes a complete series of shutter models that can be installed in any regional context in our Italian territory and also abroad. The multiple models are accompanied by 11 types of perimeter frames of different shapes and sizes. The mix of products and application possibilities make it easier for our partners to find the most suitable solutions both for new contexts on insulating walls and in renovation situations. The thickness of the products in this collection varies from 45 to 52 mm depending on the model. There are many possibilities for placement: direct on the wall with hinges, with perimeter frames, sliding with one or more tracks to name a few. Innovation and technology are well represented in this collection which boasts robust, resistant and also, for some, certified burglar-proof products.

PUNTO®
PERSIANE

Our job is to provide robust, long-lasting and safe products for those who use them. Our experience has led us to include **innovative elements** that characterize and distinguish all the products of the Infinita Collection from the rest of the market.

On the next page you will find detailed descriptions for each of them.

Innovative Elements

1

Renovation frames

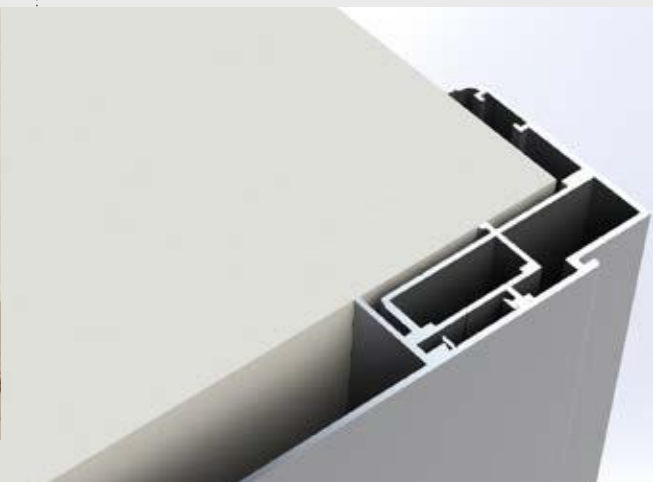

They reproduce the shapes and dimensions of those wooden frames shutters.. Excellent aesthetic result thanks to the use of the frame only, without additional plates/angular profile.

2

Frames with covers

Frames that have a specific solution for covering the wall compartment, made on request with aluminum profiles of different sizes, adaptable to the remaining space between the window and the frame.

3

Frames with telescopic wall fixing

Punto Persiane is the first and only to offer the innovative wall fixing solution with integrated telescopic compensation profiles on the market. This type of solution, in addition to aesthetically improving the junction between the frame and the wall, significantly reduces installation times and costs.

4

Aluminum alloy hinges

Our standard hinges are made to our specific design with a load-bearing structure in extruded aluminum alloy which makes them robust and resistant to any atmospheric agent. This material allows it to be colored with the same powder paint that is used for extruded aluminum profiles. The aluminum alloy guarantees high durability in any environmental situation.

PUNTO®
PERSIANE

5 Special self-lubricating equipment

Our standard hinges are equipped with a specific self-lubricating cylindrical bushing, which does not allow contact between the hinge pin and the hinge itself, avoiding wear over time, difficulty in handling and noise.

6 Accessories for safety during lifting and detachment

The safety of people comes first for us. For wall or frame shutters we have engineered an anti-fall system which is supplied on request, with the aim of preventing the shutters from slipping off the support pins. The same concept has also been adopted for sliding solutions.

7 Reinforced and burglar-proof certified solutions

The Infinita collection is also designed to resist break-in attempts. Various models in the collection can in fact be reinforced with steel systems and dedicated locks, without changing the aesthetics of the product compared to standard models. Some models have been tested in the laboratory and certified with Class RC2 burglary resistance.

8 T-Rinforzo Technology

On all models with frame it is possible to use the "T-Rinforzo" burglar resistance technology, created with particular round stainless steel bars, arranged horizontally.

Plus

+ Wide range of models and solutions

The Infinita Collection has a wide range of models and application solutions (on wall solution and with frames) that embrace the many different Italian regional traditions.

+ Customization

The Infinita collection was created in such a way that the different models can be combined with each other, allowing mixed combinations, such as for example shutters with fixed blades, open at the top and bottom, fixed blind blades, rather than adjustable or panel, etc.

+ Multiple types of frames

The multiple types of perimeter frame available in different shapes and sizes are designed to satisfy different wall application situations, including renovation ones.

+ Adaptable mobile structure

Solutions with fixed frame and direct wall applications which always use the same structure for the mobile door and which therefore does not change on an aesthetic level from one version to another. An example of the usefulness of this feature is when scaffolding cannot be used and it is therefore necessary to use a fixed retractable perimeter frame. In this case the shutter appears as if it were mounted on the wall.

+ Aluminum with variable thickness

Thanks to the study of our Research and Development Office in collaboration with our extruder partners, the profiles that make up our shutters change their thickness, considerably increasing it in strategic and support points, such as, for example, the screw fixing areas for anchoring the straps. One of the advantages of this feature is that it can guarantee certified fixing, tested in the laboratory, which is very important for safety.

+ Hidden fixing screws

To make them more similar to traditional wooden shutters, the fixing screws and the teeth of the assembly brackets, which are normally visible, have been hidden.

+ Large leaf profile size

In addition to making the shutter more robust, it improves its aesthetic appearance, making it more similar to a wooden one. Huge advantages from a functional point of view when using handles and cylinders.

+ Hidden accessories

The doors with wall-mounted and frame versions have a particular design that allows the support accessories to be hidden from view. The same applies to locks and locking strike plates.

PUNTO®
PERSIANE

+ Product certification

The products we build and sell have been tested in the laboratory according to the CE marking requirements, both in the wall-mounted and sliding versions, with wind resistance certified in Class 6.

+ Accessory certifications

The accessories most subject to use and wear have been voluntarily tested in the laboratory according to the UNI EN 14648:2008 standard. In compliance with our business code of ethics, the most commonly used standard hinges have been voluntarily tested by us in laboratories certified according to the UNI EN 13659 standard, given that they are the most important element for supporting and anchoring the door to the wall or chassis.

Products guaranteed for 10 or 15 years*

Products certified in anti-burglary class RC2

Class 6 certified wind resistance

Certified with laboratory tests

Products guaranteed by Generali insurance policy*

All Original Punto Persiane products are CE certified according to the UNI EN 13659 standard

* Check in advance with our offices the actual applicable coverage and warranty conditions

+ Multiple lock types

The large size of the door profile allows the use of various types of locks, from traditional ones to multi-point ones, as well as applied ones, as well as the use of Cremone bolts with hidden rods.

+ Colored gaskets

The rebate gaskets are supplied in three colors, which can be combined with all types of shutters, with the aim of providing aesthetically beautiful products.

+ Insulating elements that can be inserted inside the slats

Some versions of the shutters can be made on request in the R (filled) or TT version, with insulating elements inserted inside the slats to improve the acoustic and in some cases thermal performance of the shutters themselves.

+ Special accessories

Dedicated accessory solutions for solving applications and installations on insulated walls.

Shutters
Fixed round blades

Angela

50 mm blades

The ANGELA shutter has the characteristic of having fixed 50 mm round blades in an inclined position, separated from each other by special nylon spacers available in different colors. The oblique positioning of the blade allows for soft lighting of the rooms, avoiding direct entry of the sun's rays, also protecting from prying eyes, all combined with effective ventilation.

Giulia

50 mm blades

The GIULIA shutter has the characteristic of having fixed 50 mm round blades in an inclined position, separated from each other by special painted aluminum spacers. With this system you obtain a shutter in which all visible parts are made of aluminium. The size, rounded shape and oblique positioning of the blade combined with aesthetic embellishment frames eliminate the presence of edges and spaces in which dust can accumulate.

Shutters
Fixed round blades

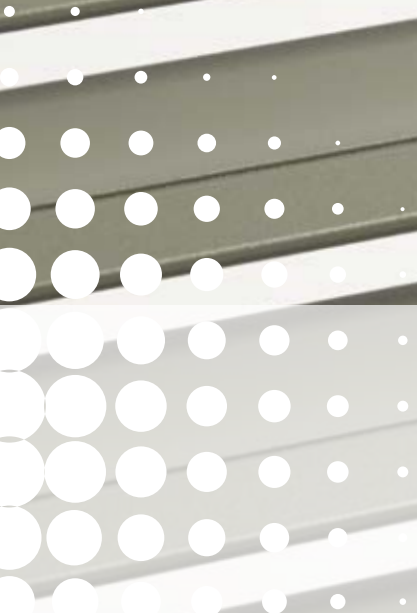

Luna

Fixed blind oval blades

The LUNA shutter has the characteristic of having fixed blind blades in an inclined position with interlocking internal and external overlap. The blades are inserted into the load-bearing structure of the shutter with a special hooking system completely made of aluminum which prevents the passage of light between the slats and makes the structure safer against break-in attempts. Furthermore, the complete absence of nylon spacers gives the LUNA shutter a clear aesthetic advantage, especially in particular colors or wood finishes.

Shutters
Fixed rhomboid blades

Camelia
Piemontese
Storica
Firenze

Shutters
Fixed rhomboid blades

Camelia

60 mm rhomboidal blades

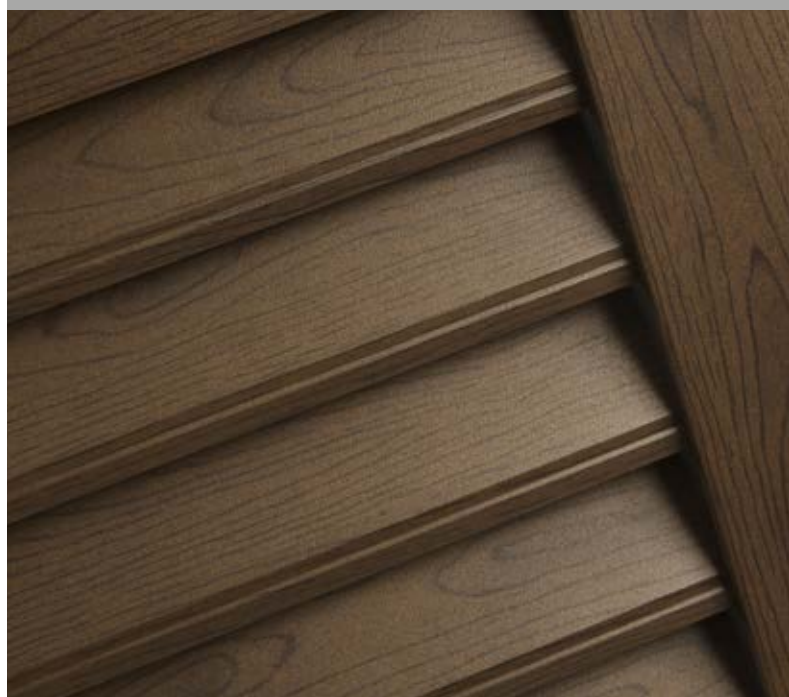

Made with fixed 60 mm rhomboidal blades in an inclined position which give the shutters the typical appearance of those today called "old type". CAMELIA finds space both in new buildings and in old rural villages and in countryside areas. The blades are separated from each other by special painted aluminum spacers to guarantee better robustness of the shutter against break-in attempts.

Piemontese

65 mm rhomboidal blades

Made with fixed 65 mm rhomboidal blades in an inclined position typical of buildings in the city centers of Piedmont, the PIEMONTESE shutter is particularly suitable for renovations and delicate recovery operations of historical buildings. The size, shape and particular framing of the blades make this shutter the exact replica of the ancient wooden ones. Separated from each other by special nylon spacers, the blades allow for soft lighting in the rooms.

Shutters
Fixed rhomboid blades

Storica

90 mm rhomboidal blades

Made with fixed 90 mm rhomboidal blades in an inclined position typical of buildings in the city centers of central-northern Italy, STORICA is a shutter particularly suitable for renovations and delicate recovery operations of historical buildings. The leaf frames have an ornamental profile that border the blades along the entire internal perimeter and which make this shutter the exact replica of the ancient wooden ones.

Firenze

90 mm rhomboidal blades

The FIRENZE shutter which is made with fixed 90 mm rhomboidal blades in an inclined position, is embellished with a highlighted perimeter edging frame which is typical of Tuscan living contexts. Inside it is also possible to insert openings called "Florence hatch" whose peculiarity is that of not being recognizable from the outside when it is closed.

Shutters

Adjustable blades

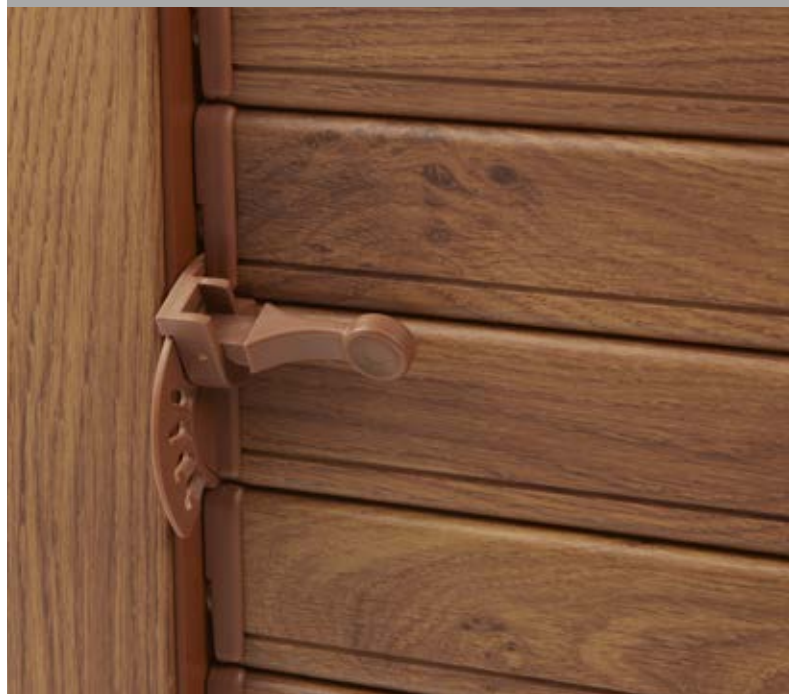

Aurora

Aurora

Drop-shaped adjustable blades

Made with ADJUSTABLE "Drop" shaped blades, the AURORA shutter has a particular coupling system between the blades which allows absolute protection from light, dust and atmospheric agents. The mechanisms, which on request can be in the same color as the doors, are an important aesthetic detail, the orientation of the blade facilitates the cleaning of the shutters. Thanks to the exceptional reliability and maneuverability of the mechanisms, the orientation is fluid and silent. The teardrop shape of the slat also characterizes its use in particular architectural styles.

Alto Adige

Horizontal slats

The typical horizontal slats perfectly set in the perimeter of the leaf make the ALTO ADIGE shutter stand out for its particular aesthetic typical of the Alpine valleys. The harmony between the horizontal grooves given by the slats and the sober structure of the frame gives the shutter a perfectly balanced aesthetic in size and shape, showing elegance and attraction at the same time. The ALTO ADIGE shutter is also available in the ALTO ADIGE (R) version with slats filled with insulating material.

Shutters
Blind with slats

Cortina

Vertical slats

The typical vertical slats perfectly set in the perimeter of the leaf make the CORTINA shutter stand out for its aesthetics of the Lombard valleys. The harmony between the vertical grooves given by the slats and the sober edging of the frame gives the shutter a perfectly balanced aesthetic in size and shape, showing elegance and attraction at the same time. The CORTINA shutter is also available in the CORTINA (R) version with slats filled with insulating material.

Nerina

Frames with vertical slats

Made with a visible perimeter structure internally and externally, the NERINA model shutter is characterized by a frame with accentuated roundness arranged along the central perimeter in which the vertical slats typical of Lombard shutters are perfectly set. This frame highlights the difference in depth of the slats compared to the thickness of the leaf. The NERINA shutter is also available in the NERINA (R) version with slats filled with insulating material.

Shutters
Blind with slats

Diamante

Diamond panels

It is the typical of the entire Alpine arc, made with the characteristic diamond panel in which the insulated layer in double aluminum sheet are perfectly set. Also achievable in a multi-color version, DIAMANTE can also be built in a mixed version: with adjustable "Aurora" blades, with fixed "Luna" and also the classic 50 mm blade.

Canazei

Smooth insulated panels

Made with a visible perimeter structure internally and externally, the CANAZEI shutter model is characterized by a smooth board surface made up of a thermal insulation panel, set in the perimeter frame of the door, which highlights the load-bearing structure both externally and internally. The typical boards perfectly inserted into the perimeter of the leaf make the shutter stand out for its particular aesthetic typical of the Alpine valleys.

Frameless shutters with slats

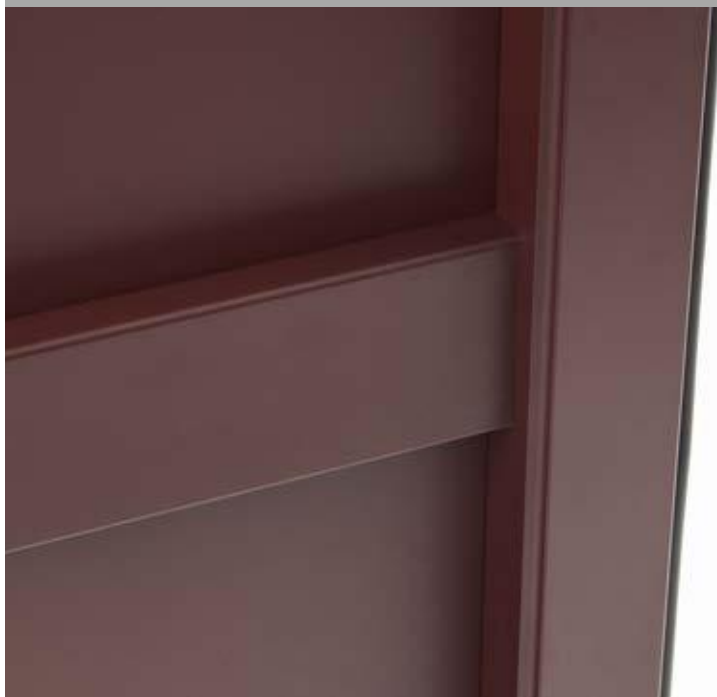

Aida
Oscura - Oscura **R**
Oscura Duo - Oscura Duo **TT**
Scandola - Scandola **TT**
Scandola Duo - Scandola Duo **TT**

Aida

Smooth insulated panels

The peculiarity of the AIDA shutter is that with the leaves closed the external surface appears to be a smooth board made up of a thermal insulation panel while inside the load-bearing structure typical of wooden shutters is highlighted. The resulting aesthetic simplicity refers to the sweetness of a style that easily adapts to classic and modern architectural contexts; a pleasant product made with solid and reliable materials over time.

Frameless shutters
with slats

Oscura

Vertical slats

It is the classic shutter that faithfully reproduces the shapes of the old wooden shutters from which it inherits the characteristics. The OSCURA shutter with vertical slats of approximately 85 mm typical of the Veronese and Mantua areas, has no visible frames on the outside while on the inside it highlights the traditional structure of wooden shutters. The OSCURA (R) version is made by filling the slats with insulating material.

Oscura Duo

Vertical slats EXTERNAL
Vertical slats INTERNAL

The OSCURA DUO is the typical shutter of the Po Valley, characterized by vertical slats with a pitch of approximately 60 mm totally visible, both on the internal and external part, thanks to the barely visible concealed load-bearing structure. It is also available in the OSCURA DUO [T T] version, which is filled with insulating material which improves the thermal and acoustic performance of the shutter.

Frameless shutters
with slats

Scandola

Vertical slats EXTERNAL
Horizontal shingles INTERNAL

SCANDOLA is the classic "mantovana" shutter which faithfully reproduces the shapes of the old wooden shutters from which it inherits the characteristics. Made with external vertical slats and typical internal horizontal shingles, the shutter is also available in the SCANDOLA [TT] version with high thermal insulation power.

Scandola Duo

Horizontal shingles EXTERNAL

Horizontal shingles INTERNAL

Scandola Duo is the classic shutter that recalls the shapes of the old wooden shutters from which it inherits the characteristics. Made with the typical internal and external horizontal shingles, the shutter is available in the Scandola Duo TT version too, with high thermal insulation power.
